## THORNE WHEAT

A new smooth wheat that is outyielding other varieties, is more winter hardy, smut resistant, stands up better, and is easier to combine. It is expected to replace other wheats in Virginia, Maryland and the Southern Piedmont and Mountains as rapidly as seed can be increased.

It averaged 5 bushels per acre more than Redhart for two years at 6 Virginia Experiment Stations. For 3 years it outyielded standard wheat varieties in the Maryland tests. In Western North Carolina for 6 years it outyielded other wheats at 3 experiment stations.

V. P. I. writes us: "Thorne is one of the leading wheats for Virginia. We are anxious to increase the supply of high quality certified seed as rapidly as possible. We would appreciate it very much if you would assist us."

## ARGENTINE ALFALFA

The Argentine-grown Alfalfa seed we are offering is all grown in the cool climate of Argentina. Throughout the Southeastern part of our country it has been found hardy, and will not winter-kill. It is equal to Kansas and Oklahoma-grown Alfalfa in its resistance to winter-killing.

The Argentine-grown seed we sold last year turned out very well indeed, some people having already cut as many as three crops of it from a field.
